

TNG Users

In TNG, there is no year-end closure, so no special actions prior or after the New Year eve are required.

Yet, the following checks and actions are still in need:

1. IT department must see to it that backups are made, and latest RMAN and Database Export copies transferred onto a removable or backup media.
2. Checks must be done for the available free space on TNG server disk D (or another disk where Oracle is installed). If disk free space is less than 10GB, analysis should be made on what it is that takes it up, and delete it or transfer onto other disks.
3. If low disk space volume is caused by Oracle DBMS archive logs, HRS support must be solicited.
4. Check PMS and Micros Interfaces, if installed.
5. In TNG, you'd better check time and date intervals, if these are used in your system for access control and discounts. For this, open 'Date and Time' menu in system configuration.
6. Also, prices of goods and procedures must be checked for any limitations on dates. To do it, open menu settings and check the required items.

As regards the last two points, make sure there are no items, the validity period of which is limited by December 31 of the departing year.
